

Bull Sale
2022

Our Story

We would like to welcome you to our fifth Annual Marcella Angus, Brangus and Ultrablack bull sale.

We are very proud of our bulls this year they are the type we are trying to breed Sleek well muscled with impeccable temperament. The Sire lines this year consist of Dance Registry M177, Marcella Total Impact L615, Carrabar Docklands L33, Dance Traction N2, Lode Creek Prophet N6, Dance Up River M133, Alkoomie Conan 468M5 (P)(ET) and Boonderoo Landau 530M (P)(AI).

Our cows run under commercial conditions in forest ticky country. These cows are extremely resilient, most of them can even swim which we found out on January 8th this year.

We welcome you to book an inspection by ringing Amy or myself or Shepherdson & Boyd prior to the sale otherwise the bulls will be penned up for inspection on sale day at 10am.

We wish you all the very best with your purchases and look forward to talking with you and having some refreshments after the sale.

Genetic Information

All breeds of cattle, in fact all mammals including humans, have undesirable genetic conditions. Fortunately, advances in molecular genetics have facilitated the development of DNA tests for their management.

AM, NH, CA and DD are simply inherited recessive conditions. This means that a single pair of genes controls the condition. For this mode of inheritance two copies of the undesirable gene need to be present before the condition is seen; in

which case you may get an abnormal calf. For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier. The genetic status of animals is being reported

using five categories:

1. AMF Tested AM free
2. AMFU Based on pedigree AM free – Animal has not been tested
3. AM__% __% probability the animal is an AM carrier
4. AMC Tested AM-Carrier
5. AMA AM-Affected

For NH, CA and DD simply replace AM in the above table with NH or CA.

Question: Crossbreeding and AM, NH, CA and DD

I use Angus bulls in a cross-breeding program. Have the genetic conditions been found in other breeds? What is the risk of an affected calf if joining to cows of another breed?

Short Answer:

If the females you are using to crossbreed with have:

1. No Angus content - you can use AMC, AM__%, AMFU or AMF bulls without expecting any affected calves (substitute with NH or CA for same result)
2. Some Angus content - you should use AMF or AMFU bulls to avoid any problems.

Note: Be aware that some breeds have had infusions of Angus in the past.

APR - Angus Performance Registered are performance recorded bulls unable to be transferred for stud duties.

A Brief Guide to Angus Group Breedplan

Angus GROUP BREEDPLAN is an advanced genetic evaluation system that provides a genetic description of Angus cattle for a comprehensive range of traits influencing fertility, growth and carcass performance. It provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBVs). EBVs are based on all available pedigree and performance records provided by breeders in Australia and New Zealand, along with available overseas genetic information.

EBVs are expressed in the units of measurement for each particular trait, and are shown as +ive or -ive differences from the breed base. The average EBV for different traits changes over time as the breed makes genetic progress. The averages for calves born in 2018 are shown below. These averages provide a useful benchmark for comparison of EBVs for individual animals.

* Breed average represent the distribution of EBVs across the 2018 drop Angus and Angus-influenced animals analysed in the Mid June 2020 genetic evaluation
