

*Bull Sale*  
*2025*

*Welcome to our 8th Annual Marcella  
Angus, Ultrablack and Brangus Bull Sale*

WE feel this is our most consistent offering of Angus bulls yet with our new sire lines Eaglehawk Capitalist P152 and Clunie Range Raptor R680 really putting their stamp on our operation. They have put a lot of punch, muscle expression and performance into our bulls this year.

The temperament of the bulls is paramount in our objectives and we do our best to have these bulls as quiet as they can be.

We feel the beef industry is in a very good place especially black cattle. As I write this, the latest grid for Angus feeder steers is \$4.80 per kg.

Our Ultrablack and Brangus program is always evolving and we have some great bulls by Telpara Hills Eldorado, which we are excited to offer you, and the ever-consistent Telpara Hills World Traveller.

We really like the shape and style that these bulls display with plenty of length and muscle definition. I think they will breed beautiful progeny with great skin type.

Our doors are always open here at Marcella so please don't hesitate to come and inspect our bulls at any time.

We look forward to welcoming you to Marcella on the 2nd August.

Fertility Testing

This year's Sale Bulls have been Semen and Morphology tested by Paul Kenny Cattle Breeding Services.

Breedplan & Performance Data

Breedplan EBVs of the sale lots are listed on page 3.

Averages for both the Spring and Autumn groups is also included for reference. These traits include:

Birth Weight (kg): The animal's actual weight on the day it is born (please note this figure is not adjusted for Gestation Length.)

Adjusted 200DW, 400DW, 600DW (kg): The weight of each animal adjusted for the three stages of the animal's age.

Scrotal Size (SCROT) and ultrasound measurements Fat (P8, Rib), Eye Muscle Area (EMA) and Intra Muscular Fat (IMF) were taken on the 3rd June 2015.

Genetic Information

All breeds of cattle, in fact all mammals including humans, have undesirable genetic conditions. Fortunately, advances in molecular genetics have facilitated the development of DNA tests for their management.

AM, NH, CA and DD are simply inherited recessive conditions. This means that a single pair of genes controls the condition. For this mode of inheritance two copies of the undesirable gene need to be present before the condition is seen; in which case you may get an abnormal calf. For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier. The genetic status of animals is being reported using five categories:

- 1. AMF Tested AM free
- 2. AMFU Based on pedigree AM free – Animal has not been tested
- 3. AM\_\_%\_\_% probability the animal is an AM carrier
- 4. AMC Tested AM-Carrier
- 5. AMA AM-Affected

For NH, CA and DD simply replace AM in the above table with NH or CA.

**Question:** Crossbreeding and AM, NH, CA and DD

I use Angus bulls in a cross-breeding program. Have the genetic conditions been found in other breeds? What is the risk of an affected calf if joining to cows of another breed?

**Short Answer:** If the females you are using to crossbreed with have:

- 1. No Angus content - you can use AMC, AM\_\_%, AMFU or AMF bulls without expecting any affected calves (substitute with NH or CA for same result)
- 2. Some Angus content - you should use AMF or AMFU bulls to avoid any problems.

Note: Be aware that some breeds have had infusions of Angus in the past.

What Are HBR & APR Bulls?

HBR - Herd book registered. These bulls are stud registered with the Angus Society and are transferable for stud duties.

APR - Angus Performance Registered are performance recorded bulls unable to be transferred for stud duties.

A Brief Guide to Angus Group Breedplan

Angus GROUP BREEDPLAN is an advanced genetic evaluation system that provides a genetic description of Angus cattle for a comprehensive range of traits influencing fertility, growth and carcass performance. It provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBVs). EBVs are based on all available pedigree and performance records provided by breeders in Australia and New Zealand, along with available overseas genetic information.

EBVs are expressed in the units of measurement for each particular trait, and are shown as +ive or -ive differences from the breed base. The average EBV for different traits changes over time as the breed makes genetic progress. The averages for calves born in 2018 are shown below. These averages provide a useful benchmark for comparison of EBVs for individual animals.

\* Breed average represent the distribution of EBVs across the 2018 drop Angus and Angus-influenced animals analysed in the Mid June 2020 genetic evaluation
