

Bull Sale
2026

Welcome to our 9th Annual Marcella Angus Bull Sale

FIRSTLY, we would like to sincerely thank you for your interest in our program and for taking the time to look through this catalogue. Whether you are a long-term supporter or visiting Marcella for the first time, we are incredibly grateful for your support and for the opportunity to present this year's offering of bulls.

At Marcella, family has always been at the heart of everything we do. Breeding quality cattle is more than just our business, it's a passion that has been passed down through generations. We are proud custodians of a family legacy that began when Marcella was established in 1932, and we remain committed to building on the values, hard work and dedication that have shaped our operation over the past decades.

This year marks our 9th Bull Sale, a milestone that would not be possible without the continued support of our clients, friends and fellow cattle producers. We are humbled by the trust placed in our genetics and are continually striving to breed cattle that are functional, productive and suited to Queensland conditions.

We invite you to inspect the bulls, ask questions and spend time with our family on sale day. We genuinely enjoy catching up with familiar faces and welcoming new ones to Marcella.

Thank you once again for your support. We look forward to seeing you on sale day and wish you every success with your cattle operation.

Warm regards,

Rhys, Amy & Isabella

Sale Day Safety

We have made every effort to ensure our bulls are quiet, however Sale Day adds extra pressure. Bulls can be unpredictable therefore people enter pens at their own risk and we request children under 16 years are prohibited from entering pens.

Vaccinations

Bulls have been vaccinated with 3 Germ blood, 7 in 1 and 3 Day Sickness.

Fertility Testing

This year's Sale Bulls have been Semen and Morphology tested by Paul Kenny Cattle Breeding Services.

Breedplan & Performance Data

Breedplan EBVs of the sale lots are listed on page 3.

Averages for both the Spring and Autumn groups is also included for reference. These traits include:

Birth Weight (kg): The animal's actual weight on the day it is born (please note this figure is not adjusted for Gestation Length.)

Adjusted 200DW, 400DW, 600DW (kg): The weight of each animal adjusted for the three stages of the animal's age.

Scrotal Size (SCROT) and ultrasound measurements Fat (P8, Rib), Eye Muscle Area (EMA) and Intra Muscular Fat (IMF) were taken on the 3rd June 2015.

Genetic Information

All breeds of cattle, in fact all mammals including humans, have undesirable genetic conditions. Fortunately, advances in molecular genetics have facilitated the development of DNA tests for their management.

AM, NH, CA and DD are simply inherited recessive conditions. This means that a single pair of genes controls the condition. For this mode of inheritance two copies of the undesirable gene need to be present before the condition is seen; in which case you may get an abnormal calf. For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier. The genetic status of animals is being reported using five categories:

1. AMF Tested AM free
2. AMFU Based on pedigree AM free – Animal has not been tested
3. AM__%__% probability the animal is an AM carrier
4. AMC Tested AM-Carrier
5. AMA AM-Affected

For NH, CA and DD simply replace AM in the above table with NH or CA.

Question: Crossbreeding and AM, NH, CA and DD

I use Angus bulls in a cross-breeding program. Have the genetic conditions been found in other breeds? What is the risk of an affected calf if joining to cows of another breed?

Short Answer: If the females you are using to crossbreed with have:

1. No Angus content - you can use AMC, AM__%, AMFU or AMF bulls without expecting any affected calves (substitute with NH or CA for same result)
2. Some Angus content - you should use AMF or AMFU bulls to avoid any problems.

Note: Be aware that some breeds have had infusions of Angus in the past.

What Are HBR & APR Bulls?

HBR - Herd book registered. These bulls are stud registered with the Angus Society and are transferable for stud duties.

APR - Angus Performance Registered are performance recorded bulls unable to be transferred for stud duties.

A Brief Guide to Angus Group Breedplan

Angus GROUP BREEDPLAN is an advanced genetic evaluation system that provides a genetic description of Angus cattle for a comprehensive range of traits influencing fertility, growth and carcase performance. It provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBVs). EBVs are based on all available pedigree and performance records provided by breeders in Australia and New Zealand, along with available overseas genetic information.

EBVs are expressed in the units of measurement for each particular trait, and are shown as +ive or -ive differences from the breed base. The average EBV for different traits changes over time as the breed makes genetic progress. The averages for calves born in 2018 are shown below. These averages provide a useful benchmark for comparison of EBVs for individual animals.

* Breed average represent the distribution of EBVs across the 2018 drop Angus and Angus-influenced animals analysed in the Mid June 2020 genetic evaluation
